

STAT 408 Lab 2: dplyr

Jess Kunke

Jan 22, 2026

Create a new quarto document titled “STAT 408 Lab 2: dplyr” and put your name and some sensible date (the due date or today’s date, for instance). Write out the instructions for the exercises in Sections 3.2.5 and 3.3.5, and solve them. Your solutions don’t have to be long or fancy (in fact, these exercises only require brief answers and code), but do use a mix of text and code to make it easy for someone to read and understand your answers and what you did.

The format of the body of your quarto document should be something like what you see below. You don’t have to format it exactly this way, as long as you make sure (1) you have a separate **##** heading for the exercises from Section 3.2 and those from Section 3.3, and (2) you number the exercises as in those sections and copy the instructions over for each exercise.

Section 3.2.5: working with rows

1. Instructions...

My answer...

2. Instructions...

My answer...

...

Section 3.3.5: working with columns

1. Instructions...

My answer...

2. Instructions...

My answer...
